-- TISSUE SPECIFICITY: Expressed in testis, thymus, prostate and
ovary and weakly expressed in lung, brain and kidney.
-- PTM: Phosphorylated by AKT1 and ILK1.
-- SIMILARITY: Belongs to the Ser/Thr protein kinase family. GSK-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

Nat. Biotechnol. 23:94-101(2005).
-!- FUNCTION: Participates in the Wnt signaling pathway. Implicated in the hormonal control of several regulatory proteins including glycogen synthase, MYB and the transcription factor JUN (By

    Similarity).
    CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
    SUBUNT: Monomer. Interacts with NIN (By similarity).
    PTM: Phosphorylation on Tyr-216 is necessary for the activity (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ξ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Serine/threonine-protein kinase; Transferase; Wnt signaling pathway.

CHAIN 1420 Glycogen synthase kinase-3 beta.

PTIGE-PRO 0000085981.

PTO PROTEIN S6 340 Protein kinase.

NP BIND 62 70 ATP (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               similarity).
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. GSK-3

-!- FUNCTION: Plays a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into 5-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component of MPP (By similarity).

-!- SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature oocytes (By similarity).

-!- SUBINITY: Belongs to the Ser/Thr protein kinase family.

New glycogen synthase kinase 3 (GSK3) inhibitors and nucleic acids encoding them, useful for treating diseases mediated by GSK3 activity, including Alzheimer's disease, type 2 diabetes and inflammation.

Claim 8; Fig 2A-B; 36pp; English.

The invention provides glycogen synthase kinase 3 (GSK3) polypeptides capable of crystallisation, including GSK3alpha and GSK3beta polypeptides. The GSK polypeptides can be used to identify and optimise GSK3 inhibitors. Nucleic acid encoding the GSK polypeptides are useful as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WIKVFRPRIPPEALALCSRILEYTPTARLTPLEACAHSFFDELRDPNVKHPNGRDTPALF 370
                                                                         The invention relates to antisense compounds targetted to nucleic acid encoding glycogen synthase kinase 3-beta (GSK3B) (also known as tau protein kinase I (TPK-1). The antisense compound is useful for inhibiting the expression of glycogen synthase kinase 3-beta enzyme in cells or tissues and for treating diseases or conditions associated with the enzyme such as insulin regulation disorder, in particular diabetes and neurological disorder, e.g. Alzheimer's disease and bipolar illness. The antisense compound is also useful for diagnosing diseases associated with the expression of glycogen synthase kinase 3-beta and for prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation and as a research reagent. The present sequence is human glycogen synthase kinase 3-beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glycogen synthase kinase 3; GSK3alpha; GSK3beta; nootropic; human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MSGRPRITSFAESCKPVQQPSAFGSMKVSRDKDGSKVTTVVATPGQGPDRPQEVSYTDTK 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides glycogen synthase kinase 3 (GSK3) polypeptides capable of crystallisation, including GSK3alpha and GSK3beta polypeptides. The GSK polypeptides can be used to identify and optimise GSK3 inhibitors. Nucleic acid encoding the GSK polypeptides are useful a pharmaceutical agents, for treating diseases mediated by GSK3 activity, including Alzheimer's disease, type 2 diabetes and inflammation. The present sequence represents the amino acid sequence of human GSK3beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New glycogen synthase kinase 3 (GSK3) inhibitors and nucleic acids encoding them, useful for treating diseases mediated by GSK3 activity, including Alzheimer's disease, type 2 diabetes and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MSGRPRTTSFABSCKPVQQPSAFGSMKVSRDKDGSKVTTVVATPGQGPDRPQEVSYTDTK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  250
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to inhibiting/enhancing angiogenesis. The method involves administering to a subject needing the treatment, an angiogenesis inhibitor/promocter, such as an active/inactive glycogen synthase kinase-3 (GSK3) molecule or a GSK3 kinase activator/inhibitor, where the angiogenesis modulator is administered to inhibit/enhance angiogenesis in a subject. The methods are useful for treating a condition associated with increased apoptotic cell death of vascular endothelial cells, where the condition is characterized by lesion of blood vessel wall, such as hyperlipidemia, also in the treatment of sequence represents a human GSK3beta polypeptide (Genbank Accession No. $53324)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel Drosophila species DNA sequences and their encoded proteins with their corresponding human homologues. The proteins or their encoding polynuclectides are useful in a method of prevention, treatment or diagnosis of a disease in an individual, and used to identify a substance capable of binding to the polypeptide or modulating the polypeptide or modulating the polypeptide or modulating the polypeptide. The function of the polypeptide comprisising inclubating the polypeptide of the polypeptide. The compositions are administered to an individual in the polypeptide. The compositions are administered to an individual in the polypeptide. The apply and a biological sample comprising the mucleic acid such as DNA or the polymucleotide is detected in a biological sample, comprises brining the biological sample containing the nucleic acid such as DNA or than incontact with a probe comprising a fragment of at least 15 and electing any duplex formed between the probe and nucleic acid in the sample. The method also comprises providing an antibody capable of binding to the polypeptide, incubating a biological sample with the antibody to allow the formation of an antibody-antigen complex, and determining whether antibody-antigen complex and account and isease such as cancer. The antibody or identified substance is also useful in inhibiting the function of a polypeptide

The invention relates to a novel method for identifying an antiviral compound. The novel method comprises exposing a cell that expresses a host factor to a candidate compound to identify an agent that inhibits the expression or activity of the host factor. The novel method involves identifying an antiviral compound, comprising exposing a first cell that expression or activity of the host factor in the first cell, where a candidate compound that inhibits the expression or activity of the host factor in the first cell, where a candidate compound that inhibits the compound and a retrovirus, and determining whether the compound inhibits the ability of the retrovirus to infect or replicate within the second cell, where a potential antiviral compound. The method is useful in identifying antiviral agents, including the ability of the retrovirus to infect or replicate within the second cell, where a potential antiviral compound that inhibits the ability of the retrovirus to infect or compound. The method is useful in identifying antiviral agents, including those that are effective against retroviruses, such as HIV. This sequence represents a human host factor protein used in the antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VIGNGSFGVVYQAKLCDSGELVAIKKVLQDKRFKNRELQIMRKLDHCNIVRLRYFFYSG 120

The invention relates to a novel method for identifying a compound capable of treating a hematological disorder which comprises combining a compound to be tested with a specific polypeptide under conditions as suitable for binding of the test compound to the polypeptide. The method of the invention has haematological and cytostatic applications and may be useful for identifying compounds for treating a haematological disorder associated with erythroid cells e.g. anaemia and erythrocytosis, bone marrow e.g. leukaemia, platelets e.g. thrombocytopenia and transpass or Ba-cells and T-cells e.g. neutropenia. The compounds identified may be utilised during gene therapy procedures. The current sequence is that of a human haematological disorder-related protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 VIGNGSFGVVYQAKLCDSGELVAIKKVLQDKRFKNRELQIMRKLDHCNIVRLRYFFYSSG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         241 WSAGCVLAELLIGQPIFPGDSGVDQLVEIIKVLGTPTREQIREMNPNYTEFKFFQIKAHP 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying a compound capable of treating a hematological disorder comprises combining a compound to be tested with a polypeptide related with the disorder under conditions suitable for binding of the test compound to the polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a method of identifying a candidate branching morphogenesis modulating (MBM) agent. The method comprises: providing an assay system comprising a MBM polypetide or nucleic acid; contacting the assay system modulating and the presence of the system provides a reference activity, except for the presence of the test agent; and detecting a test agent-blased activity of the assay system, where a difference between the test agent-blased activity and the reference activity identifies the test agent as a candidate branching morphogenesis in a mammalian cell; and a method of modulating morphogenesis in a mammalian cell; and a method for diagnosing a disease in a patient. The method is useful in identifying a candidate branching morphogenesis modulating agent for preparing a composition for diagnosing or treating cancer. This is the amino acid sequence of a human branching morphogenesis modulating (MBM) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying a candidate branching morphogenesis modulating agent for treating cancer comprises contacting the assay system comprising a MBM polypeptide or nucleic acid with a test agent and detecting a test agent-biased activity.

which interact with proteins e.g. enzymes, receptors, or signaling, which interact with proteins e.g. enzymes, receptors, or signaling proteins, in order to regulate the activity of the proteins. The method comprises identifying a switch control ligand forming a part of the protein; identifying a switch control ligand forming a part of the protein and which interacts with the switch control ligand, where the ligand interacting in vivo with the pocket to regulate the conformation and biological activity of the protein so that the protein will assume a first conformation and a first biological activity upon the ligand-pocket interaction, and will assume a second different conformation and a biological activity in the absence of the ligand-pocket interaction, providing respective samples of the protein in the first and second conformations, and screening at least one of the samples against one or more candidate molecules by contacting the molecules and one sample, identifying small molecules which bind with the protein at the region of the both for modulating protein activity of the protein. The meethod is useful for modulating protein activity of the identification of new pharmacological compounds and for treatment modalities. The present conforms is ableased to which a switch control ligand was

                                                                                                                                                                                                                                                                                                                                                                                                                     AAQ67459 codes for a newly isolated tau-protein kinase I enzyme (TPK-1), shown in AAR61327 (compare to human AAR61326). The cDNA was cloned from a art fetuse brain cDNA library, and was expressed in insect cells. TPK-I acts specifically on tau-protein, which is thought to be involved in Alzhaimer's disease (AD) and senile dementia of the AD type. It is hoped that the characterisation of TPK-I may lead to development of new agents for the prevention and therapy of these diseases. (Updated on 25-WAR-2003 to correct PA field.) The specification describes the structure of glycogen synthase kinase (GSK)3beta protein in crystalline form. GSK3beta is frequently rearranged in advanced T-cell lymphomas. The crystalline structure of GSK3beta is useful in the design or selection of potential inhibitors and/or activators of GSK3beta kinase activity. Such inhibitors and activators are useful for treating Type II disbetes mellitus, obesity, neurodegenerative disorders such as Alaheimer's disease, stroke and mood disorders such as bipolar and unipolar depression, schizophrenia, cancer, in humans. Because GSK3beta may crystallize in more than one crystallic form, the structure coordinates of GSK3 or its portions are particularly useful to solve the structure of GSK3 mitants, GSK3. They may also be used to solve the structure of GSK3 mitants, GSK3 co-complexes, or of the crystalline form of any other protein, particularly kinases with significant anino acid sequence homology to any functional domain of GSK3. The present sequence represents the beta isoform of GSK3beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EKKDEVYLNLVLDXVPETVYRVARHYSRAKQTLPVIYVKLYMYQLFRSLAYIHSFGICHR 190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 71 VIGNGSFGVVYQAKLCDSGELVAIKKVLQDKRFKNRELQIMRKLDHCNIVRLRYFFYSSG 130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel crystal structures comprising glycogen synthase kinase (GSK)-3 beta protein or crystal structure comprising a GSK-3 beta: frequently rearranged in advanced T-cell lymphomas (FRAT)-tide complex in crystalline form.
                                                                                                                                                                                                                                                                                    Glycogen synthase kinase 3 beta; GSK3beta; T-cell lymphoma; stroke; Type II diabetes mellitus; obesity; neurodegenerative disorder; cancer; Alzheimer's disease; mood disorder; depression; schizophrenia; cyclin-dependent kinase 2; substrate; protein coordinate data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11 MSGRPRITSFAESCKPVQQPSAFGSMKVSRDKDGSKVITVVATPGQGPDRPQEVSYTDTK

allergy, asthma, Huntington's disease, Parkinson's disease, AIDS-related dementia, amyotrophic lateral sclerosis (Lou Gehrig's disease), multiple sclerosis, cardiomyocyte hypertrophy, reperfusion/ischaemia and baldness. The present sequence is human (SK-3 beta, used to illustrate the invention. GSK-3 beta is a serine/threonine protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GSK3; angiogenesis; glycogen synthase kinase-3; antilipemic; cardiant; vulnerary; antiarteriosclerotic; GSK3beta; enzyme.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel pyrazolo(3,4-c)pyridazine derivatives, which have glucogen synthase kinase-3 (GSK-3) inhibitory activity. The derivatives are useful for inhibiting beta-catenin phosphorylation and hyperphosphorylated Tau protein protein in a patient and GSK-3 activity in a patient or in a biological sample. The derivatives are also useful for treating schizophrenia, Alzheimer's disease, diabetes, autoimmune diseases, inflammatory diseases, metabolic, neurological and neurodegenerative diseases, cardiovascular diseases,

                                                      The invention relates to inhibiting/enhancing angiogenesis. The method anglogenesis inhibitor/promoter, such as an active/inactive glycogen synthase kinase-3 (GSK3) molecule or a GSK3 kinase activator/inhibitor, where the angiogenesis modulator is administered to inhibit/enhance angiogenesis in a subject. The methods are useful for treating a condition associated with increased apoptotic cell death of vascular endothelial cells, where the condition is characterized by lesion of Mood vessel wall, such as hyperlipidem, also in the treatment of myocardial infarction and in the promotion of would healing. The present sequence represents a human GSK3beta polypeptide (GenBank Accession No.
                                                                                                                                                                                                                                                                                                     9

The invention relates to a novel method for the phosphorylation of tau protein in which tau protein or its partial peptide is phosphorylated the action of phosphoenzyme I, a serine-threonine phosphorylase. The method of the invention may be used for elucidation of the cause of Alzheimer's disease and Alzheimer type senile dementia. The current sequence is that of the rat tau phosphorylation-related protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 15
S17642
protein kinase MSK-3 (EC 2.7.1.-) [similarity] - alfalfa
C.Species: Medicago sativa (alfalfa)
C.Species: May-2000 #sequence_revision 05-May-2000 #text_change 05-May-2000
C.Accession: 337642
A.Title: The MsK family of alfalfa protein kinase genes encodes homologues of shaggy/gly
A.Reference number: S37642; MUID:94004996; PMID:8401615
A.Accession: S37642
A.Molecule type: mRNA
A.Residues: I-412 < PAPA
A.Residues: I-412 < PAPA
A.Residues: I-412 < PAPA
A.Residues: The Phosphotransforming protein; protein kinase homology
C.Superfamily: kinase-related transforming protein; protein kinase homology < KIN>
F.31-334 Domain: protein kinase ATP-binding motif
F:104/Active site: Lys #status predicted
A;Residues: 1-472 cGEI>
